

Logo & Messages

Libraesva ESG allows full user messages customization as well as white labeling feature, by uploading your own logo.

User Message Customization

A full set of pre-defined messages is present in Libraesva ESG. These messages can be fully customized by selecting menu *System->Appliance->Logo and Messages*.

The screen is divided in several Tabs, grouping messages types:

Libraesva ESG Message Reports

From this page you can edit signatures, report message and system responses to senders and recipients.

Messages are formatted either in text or HTML format, depending on the message. For HTML, the rich editor allows you to define formatting styles. A number of variables are available for the reports, see the [Help](#) tab for more information.

The active language is set in [quarantine settings](#) under "General Settings"; in your appliance you may have more than one language used, depending on the domain.

The Tabs and messages available are:

- **Signatures**

These are footer messages. Libraesva ESG appends by default for any incoming and outgoing message a disclaimer. You can Disable whole footers by clicking Disable.

- **Content Filtering**

These messages are sent to users in attachment to any email with a blocked content (i.e. Viruses, Blocked Files) in replacement of the original attachment.

- **MCP Messages**

These messages are sent to users when MCP Actions triggered are *Bounce* or *Notify*.

- **Spam Messages**

These messages are sent to users when Spam Actions triggered are *Attachment*, *Notify*, *Bounce*.

- **Notifications to Senders**

These messages are sent back to sender of blocked files or viruses if enabled.

- **Inline Phishing**

These strings are pre-pended in red as an inline warning to an html link when Antiphishing Checks are enabled and triggered.

- **QuickSand**

These messages are sent to users in attachment to any email with a blocked or disarmed content from QuickSand in replacement/addition of the original attachment.

- **Encryption**

These templates are used when an encrypted message is sent.

×**NOTE:** Most of above notifications are customizable with some variables that will be valorized at runtime. See **Variables Help Tab** for instructions.

White Labeling

To re-brand your installation with your own logo and contact, navigate to latest tab Libraesva ESG Logo.

From this section you can upload your own logo and customize your Contact Us link:

Libraesva ESG Message Reports

From this page you can edit signatures, report message and system responses to senders and recipients.

Messages are formatted either in text or HTML format, depending on the message. For HTML, the rich editor allows you to define formatting styles. A number of variables are available for the reports, see the *Help* tab for more information.

The active language is set in [quarantine settings](#) under "General Settings"; in your appliance you may have more than one language used, depending on the domain.
