

Authentication Test Tool

This tool allows authentication verification in case of login problems.

The screenshot shows the LIBRAESVA web interface. At the top, the logo reads 'LIBRAESVA email security virtual appliance'. Below the logo is a navigation bar with tabs for 'Home', 'System', 'Reports', 'Quarantine', and 'Search'. A secondary navigation bar contains dropdown menus for 'Appliance', 'Mail Transport', 'Content Analysis', 'Authentication' (highlighted in green), and 'High Availability'. The main content area is titled 'Authentication Test Tool' and contains the following text: 'This tool allows authentication verification in case of login problems.' Below this is a form section titled 'User Credentials' with input fields for 'Username:' and 'Password:', and a green 'TEST' button. The 'User Auth Test Output' section displays the following log output: '- Trying to extract domain from username: getEmailDomain(admin)', '- Verifying credentials for: **admin** with pwd: *******9** with **no domain** associated.', '- Only Username -> Verify Local Db Auth', '- Verify Credentials against Local DB (Priority)', and '-- **Authenticated!**: Admin - Userid: 1'.

×**Note:** the output value of this tool is essential for diagnosis. In case of problems, provide the test results to support.
