

Authentication sessions

Users can authenticate on the Libraesva Email Archiver by using local users credentials or by using M365, Google Workspace, Ldap or SSO/SAML integration.

Every time a user logs into the Archiver, a JSON Web Token is generated. The JWT token validity is set to 15 minutes and the refresh token validity is set to 2 hours. This values cannot be customized.

Administrators can close any Archiver session from the **Sessions** page.
