

Cluster Firewall ports requirements for workers (distributed setup)

PROBLEM:

Which ports are needed between a principal node and a worker?

SOLUTION:

From principal cluster nodes to the worker:

- TCP 22
- TCP 443
- ICMP

From the worker to principal cluster nodes:

- TCP 3306
- ICMP

Take into consideration when deploying your NAT settings, as the IP address of other node should be the NATTED one.
