

# Email link to blacklist sender doesn't work

## PROBLEM

The inline footer to directly blacklist senders doesn't work as expected and adds an empty sender line to blacklist.

## SOLUTION

This is a small bug in version 3 upgrade. To fix go to menu System->Logo and Message Customization. Edit inline html signature and correct blacklist hyperlink by adding at the end of the link \$id.

The correct url should look like:

*[http://address/cgi-bin/learn-msg.cgi?blacklist=1&id=\\$id](http://address/cgi-bin/learn-msg.cgi?blacklist=1&id=$id)*
