Esva Cluster Upgrade Procedure

PROBLEM:

How can i upgrade my Libraesva ESG Cluster installation?

SOLUTION:

- download upgrade script

- take snapshot of both nodes (not mandatory, but as a best practice!)

- login to 1st node and suspend cluster

- apply upgrade on 1st node, reboot

- login to 2nd node and apply upgrade

- reboot as requested

- login back to either node and resume cluster

Please take note that when uploading upgrade, it will take several minutes due to your connection and VM performance.

At this time you should have your cluster back in sync with updated release.
