

FUZZY OCR Hashing and Scoring

PROBLEM:

Fuzzy Ocr behaviour can be annoying in some cases as inline images used as a signature could be tagged as spam. How can i disable Fuzzy OCR hashing or adjust it's scoring?

SOLUTION:

Disabling FUZZY OCR Hashing it is possible but not from the web interface.

Login as root by ssh or console and edit the file:

```
/etc/mail/spamassassin/FuzzyOcr.cf
```

looking for the line "focr_enable_image_hashing 3" and giving it score of 0.

In the same file it's possible to adjust all other FUZZY OCR Checks scoring, for example:

```
# This is the score to give for a wrong content-type.
```

```
# e.g. JPEG image but content type says GIF
```

```
# Default value: 1.5
```

```
#focr_wrongctype_score 1.5
```

uncomment last line and adjust with desired score:

```
focr_wrongctype_score 0.2
```

At the end perform a MailScanner restart.
