

Greylisting Error: Connection Refused

PROBLEM

Messages stuck in inbound queue and the following error is logged:

```
Feb 17 02:45:29 mail postfix/smtpd[1409]: warning: connect to 127.0.0.1:2501: Connection refused
```

```
Feb 17 02:45:29 mail postfix/smtpd[1409]: warning: problem talking to server 127.0.0.1:2501: Connection refused
```

SOLUTION

Greylisting daemon is listening on tcp socket 2501 and this error means the greylisting service is not working. A restart does not help. The problem is with a corrupted Libra Esva database, so please repair your database and everything will be back online.

You can proceed as described [here](#).
