

Manage quarantine of a shared mailbox in Microsoft 365

Libraesva ESG takes information from M365 tenant in order to import users and alias associated, but the Microsoft 365 APIs actually does not provide information about shared mailbox members.

Workaround

If an user wants to manage quarantine of a shared mailbox which is member of, the user must add the shared as alias of himself.

User Manager
Libraesva ESG users can manage and access the system.

Users Domain Admin Permissions LDAP Import M365 Import G Suite Import Auto Populate Users Safe Learn Networks

Users can change their own Spam Settings:

+ New Search Export Delete Delete all Text Import ...

	Username	Full Name	Type	Quarantine Report	Quarantine Email	Source
<input checked="" type="checkbox"/>	Shared Member	Shared Member	User	No		Local

+ New

Email Address	Active
shared@domain.test	Yes
