

NTP Server Settings

PROBLEM:

How can i set an NTP Server for the appliance?

SOLUTION:

From Libra Esva version 2.6.0.0 there is an option under menù System->Networking and System Settings.

Previous versions:

To setup, login as root in console or from ssh and:

```
# chkconfig -levels 235 ntpd on
```

```
# ntpdate ntp.iem.it (or whatever server you would like to use)
```

```
# service ntpd start
```
