

Quarantine Delivery Report not sent after update to version 3.3

PROBLEM

After update to 3.3.0.0 , all of my users are no receiving the message quarantine report.

SOLUTION

Could be an old setting present in mta config that is causing an odd behavior with latest version 3.3. Try to hit “Apply Settings” under menu system->relay settings->trusted networks. This should fix. (Click it even if it’s greyed out, will do the job in any case)
