

RBL entries are not replicated in a Cluster Setup

PROBLEM

When updating RBL entries under System->Relay->RBL Filtering on either cluster node, the setting is not replicated on the other node.

SOLUTION

This is a bug in the upgrade script for existing cluster configurations. To fix delete all entries from both nodes without Applying Settings.

Re-add entries in desired order and state (Active yes/no) on one node and Apply Settings.

The other node should now be ok.
